Field Note:
The number for "Total Served - Pregnant Women" in 2004 is correct. In reporting year 2003, the "Total Served - Pregnant Women" was reported as 17, 466 but should have been reported as 8,406. Women served who were over the age of 22 were accidentally added in the "Pregnant Women" column instead of the "Other" column.
2. **Section Number:** Main
Field Name: CSHCN_TS
Row Name: Children with Special Health Care Needs
Column Name: Title V Total Served
Year: 2006
Field Note:
The change in the number of children with special health care needs reported in 2004 is due to two factors. First, the DOH has a new electronic reporting system which provides a more accurate count of CSHCN than was available previously. Secondly, the number of clients served by Sioux Valley Children's Specialty Clinic has dropped during the past year.
3. **Section Number:** Main

LIST OF MCH PRIORITY NEEDS

[Sec. 505(a)(5)]

STATE: SD FY: 2006

Your State's 5-year Needs Assessment should identify the need for preventive and primary care services for pregnant women, mothers, and infants; preventive and primary care services for children and services for Children with Special Health Care Needs. With each year's Block Grant application, provide a list (whether or not the priority needs change) of the top maternal and child health needs in your state. Using simple sentence or phrase, list below your State's needs. Examples of such statements are: "To reduce the barriers to the delivery of care for pregnant women, " and "The infant mortality rate for minorities should be reduced."

MCHB will capture annually every State's top 7 to 10 priority needs in an information system for comparison, tracking, and reporting purposes; you must list at least 7 and no more than 10. Note that the numbers listed below are for computer tracking only and are not meant to indicate priority order. If your State wishes to report more than 10 priority needs, list additional priority needs in a note at the form level.

1. Reduce unintended pregnancies.
2. Reduce infant mortality.
3. Improve pregnancy outcomes.
4. Reduce morbidity and mortality among children and adolescents.
5. Improve adolescent health and reduce risk-taking behaviors (i.e., unintentional injuries, dietary habits, physical activity, tobacco use, alcohol use, and other drug utilization).
6. Improve the health of, and services to, children with special health care needs through comprehensive services and support.
7. Improve and assure appropriate access to health services that are focused on families, women, infants, children, adolescents, and children with special health care needs.
8. Improve state and local surveillance and data collection and evaluation capacity.
9. Reduce childhood obesity.

STATE PERFORMANCE AND OUTCOME MEASURE DETAIL SHEET
STATE: SD

SP # 1

PERFORMANCE MEASURE:

Percent of women who smoked prior to pregnancy and report they stopped during pregnancy.

STATUS:

Active

GOAL

Improve pregnancy outcomes by decreasing use of smoking tobacco by women during pregnancy.

DEFINITION

Percent of women who smoked prior to pregnancy and report they stopped during pregnancy.

Numerator:

Women surveyed who report they stopped smoking during pregnancy.

Denominator:

Women surveyed who reported smoking prior to pregnancy.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

South Dakota Perinatal Health Risk Assessment survey data

SIGNIFICANCE

Smoking during pregnancy increases the risk of miscarriage, stillbirth and preterm/low birth weight babies. Improved pregnancy outcomes have been demonstrated when mothers significantly decrease or cease smoking during pregnancy. A study of Sudden Infant Death Syndrome (SIDS) showed that maternal smoking during pregnancy significantly increased the risk of death from SIDS two-fold.

SP # 4

PERFORMANCE MEASURE:

The rate (per 1,000 live births) of children under age one who die as a result of Sudden Infant Death Syndrome.

STATUS:

Active

GOAL

To reduce infant deaths in South Dakota due to Sudden Infant Death Syndrome (SIDS).

DEFINITION

Number of infants who die as a result of SIDS.

Numerator:

Number of infants who die as a result of SIDS.

Denominator:

Total number of live births in South Dakota.

Units: 1000 **Text:** Rate

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

State vital records data

SIGNIFICANCE

From 1995 to 1998, SIDS deaths averaged 18 deaths out of 82 infant deaths per year. From 1995 to 1998, the Native American deaths due to SIDS averaged 4.6 per 1,000 live births compared to the average White SIDS death of 1.3 per 1,000 live births. SIDS is occurring over three times as much in the Native American population than in the White population. One of the most important things to help reduce the risk of SIDS is to place healthy babies on their back to sleep. Education is an important piece to help reduce SIDS deaths among infants in the state. Activities related to this performance measure will impact infant mortality related to SIDS in South Dakota.

SP # 5

PERFORMANCE MEASURE:

Percent of pregnancies which are unintended (mistimed or unwanted) and result in live birth or abortion.

STATUS:

Active

GOAL

Improve pregnancy outcomes by reducing the number of unintended pregnancies.

DEFINITION

Percent of pregnancies which are unintended (mistimed or unwanted) and result in live birth or abortion.

Numerator:

Calculated number of unintended pregnancies (percent reporting unintendedness on survey multiplied by resident pregnancies resulting in one or more live birth plus resident abortions occurring in South Dakota for other than medical reasons).

Denominator:

Number of resident pregnancies resulting in one or more live birth plus resident abortions occurring in South Dakota.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

South Dakota Perinatal Health Risk Assessment and state birth records data.

SIGNIFICANCE

Unintended pregnancies are associated with maternal health risk behaviors, low use of preventive health measures including early prenatal care, child abuse and dependency on welfare. There is a great risk for complicated births and poor pregnancy outcomes including infant mortality, birth defects and low birth weight infants.

SP # 7

PERFORMANCE MEASURE:

Percent of high school youth who self-report tobacco use in the past 30 days.

STATUS:

Active

GOAL

To decrease the incidence of tobacco use and the associated health risks that accompany adolescent tobacco use.

DEFINITION

Numerator:

The state's high school fall enrollment multiplied by the percent of students self-reporting tobacco use in the past 30 days according to YRBS.

Denominator:

The state's high school fall enrollment.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Youth Risk Behavior Survey (YRBS) and DECA.

SIGNIFICANCE

Reduce tobacco use by adolescents. Smoking is responsible for one in six adult deaths in the U.S. and is the single most preventable cause of death. The 1997 YRBS indicates that 44% of the respondents reported smoking one or more cigarettes in the past 30 days. There is little variation between all grades surveyed in the YRBS. Initiation of smoking usually begins between grades 6 and 9, with minimal initiation after high school which supports the ongoing collaboration between DOH and DECA to collaboratively address adolescent tobacco use.

SP # 9

PERFORMANCE MEASURE:

Percent of school-aged children and adolescents who are overweight or obese.

STATUS:

Active

GOAL

To decrease the number of school-aged children who are overweight or obese.

DEFINITION

Number of school-aged children who are overweight or obese.

Numerator:

Number of children screened in the state's school height-weight report multiplied by the percent above the 95th percentile for 5-19 year olds on the state's School Height and Weight Report indicating overweight.

Denominator:

Number of children age 5-19 years screened in the state's school height-weight report.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

19-3. Overweight or obesity in children and adolescents.

Reduce the proportion of children and adolescents aged 5-19 years old who are overweight or obese to 5%.

DATA SOURCES AND DATA ISSUES

School Height-Weight Report - Data collection for the School Height-Weight Report for SD students was started during the 1998-1999 school year. The 1998-1999 data was analyzed using the standard at the time. The 1999-2000 and 2000-2001 data was analyzed using the new CDC growth charts. State Pediatric Nutrition Surveillance System (can currently obtain PedNSS data for children on DOH, Rosebud, Cheyenne-Eagle Butte, and Standing Rock WIC programs). Youth Risk Behavior Survey - height-weight data for elementary, middle and high school-aged children.

SIGNIFICANCE

Obesity is a risk factor for many chronic conditions including cardiovascular disease, hypertension, diabetes, degenerative joint disease, and psychological problems. Overweight can result from excessive energy intake, decreased energy expenditure or impaired regulation of energy metabolism. Weight-for-height during early infancy predicts weight-for-height during late infancy and childhood.

SP # 11

PERFORMANCE MEASURE:

Percent of children age 2-5 who are overweight or obese.

STATUS:

Active

GOAL

To decrease the number of children age 2-5 who are overweight or obese.

DEFINITION

Children age 2-5 who are overweight or obese

Numerator:

Number of children aged 2-5 years of aged screened by the South Dakota Department of Health WIC Program multiplied by the percent above the 95th percentile.

Denominator:

Number of children age 2-5 screened by the South Dakota Department of Health WIC Program.

Units: 100 **Text:** 1

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

South Dakota Pediatric Nutrition Surveillance System (PedNSS) annual report.

SIGNIFICANCE

Obesity is a risk factor for many chronic conditions including cardiovascular disease, hypertension, diabetes, degenerative joint disease, and psychological problems. Overweight can result from excessive energy intake, decreased energy expenditure or impaired regulation of energy metabolism. Weight-for-height during early infancy predicts weight-for-height during late infancy and childhood.

SP # 12

PERFORMANCE MEASURE:

Percent of infants who are breastfed at least 6 months

STATUS:

Active

GOAL

Increase the percent of infants who are breastfed at least 6 months.

DEFINITION

Number of infants who are breastfed at least 6 months.

Numerator:

Number of infants in the survey who are breastfed at least 6 months

Denominator:

Number of resident South Dakota births surveyed.

Units: 100 **Text:** 1

HEALTHY PEOPLE 2010 OBJECTIVE

16-19b: Increase the proportion of mothers who breastfed their babies at 6 months to 50 percent.

DATA SOURCES AND DATA ISSUES

South Dakota Perinatal Health Risk Assessment Survey

SIGNIFICANCE

Breastfeeding provides the most complete nutrition for infants and has many benefits to both mother and infant including decreased new cases and severity of diarrhea, respiratory infections, and ear infections. Infants who are breastfed have less overweight and the overweight rate is improved the longer the infant is breastfed.

SO # 1

OUTCOME MEASURE:

The Native American infant mortality rate per 1,000 live births.

STATUS:

Active

GOAL

To reduce the Native American infant mortality in South Dakota.

DEFINITION

Numerator:

Number of deaths of Native American infants from birth through 364 days of age.

Denominator:

Number of live births to Native American mothers.

Units: 1000 **Text:** Rate per thousand

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

State vital statistics

SIGNIFICANCE

Infant mortality rate is a traditional indicator of general health status. Native American infant mortality has been a long standing public health problem. Using a five-year rolling average, the discrepancy in Native American and white infant mortality has increased over the past five years from 2.30 in 1991 to 2.61 in 1996 while overall infant mortality rates for the state have decreased from 9.4 to 5.7. Since Native American live births compose 15 percent of the live birth cohort, South Dakota must reduce the Native American to white discrepancy in infant mortality to achieve significant improvements in infant mortality.

1. **Section Number:** Health Systems Capacity Indicator #01

Field Name: HSC01

Row Name:

Column Name:

Year: 2002

Field Note:

Numerators are based on hospital discharge data obtained through the South Dakota Association of Healthcare Organizations for the years 1999-2001. This data contains community hospital discharge data only for approximately 90 percent of the South Dakota resident discharges. After bringing in the non-community hospital discharges, the percent of total discharges in the state represented by this data will be reduced to approximately 70. The numerators were adjusted to reflect this deficiency for each of the years 1999-2001 for the community hospitals. The actual discharge data for 1998 and 2002 was not available. The numerator used for 1998 is 1999 estimated discharges and the numerator for the 2002 data is 2001 estimated discharges. 1998 and 1999 denominators are Census Bureau population estimates for the appropriate years. 2000 through 2002 denominators are 2000 Census data. Discharge data was selected using admission dates and principal diagnosis code of ICD-9-CM 493.

NEW STATE PERFORMANCE AND OUTCOME MEASURE DETAIL SHEET
STATE: SD

SP # 1

PERFORMANCE MEASURE:

Percent of women who smoked prior to pregnancy and report they stopped during pregnancy.

GOAL

Improve pregnancy outcomes by decreasing use of smoking tobacco by women during pregnancy.

DEFINITION

Percent of women who smoked prior to pregnancy and report they stopped during pregnancy.

Numerator:

Women surveyed who report they stopped smoking during pregnancy.

Denominator:

Women surveyed who reported smoking prior to pregnancy.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

South Dakota Perinatal Health Risk Assessment survey data

SIGNIFICANCE

Smoking during pregnancy increases the risk of miscarriage, stillbirth and preterm/low birth weight babies. Improved pregnancy outcomes have been demonstrated when mothers significantly decrease or cease smoking during pregnancy. A study of Sudden Infant Death Syndrome (SIDS) showed that maternal smoking during pregnancy significantly increased the risk of death from SIDS two-fold.

OBJECTIVE

2006	2007	2008	2009	2010
58	58	60	60	62

SP # 2

PERFORMANCE MEASURE:

The rate (per 1,000 live births) under age one who die as a result of Sudden Infant Death Syndrome.

GOAL

To reduce infant deaths in South Dakota due to Sudden Infant Death Syndrome (SIDS).

DEFINITION

Number of infants who dies as a result of SIDS.

Numerator:

Number of infants who die as a result of SIDS.

Denominator:

Total number of live births in South Dakota.

Units: 1000 **Text:** 2

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

State vital records data.

SIGNIFICANCE

From 1995 to 1998, SIDS deaths averaged 18 deaths out of 82 infant deaths per year. From 1995 to 1998, the Native American deaths due to SIDS averaged 4.6 per 1,000 live births compared to the average White SIDS deaths of 1.3 per 1,000 live births. SIDS is occurring over three times as much in the Native American population than in the White population. One of the most important things to help reduce the risk of SIDS is to place healthy babies on their back to sleep. Education is an important piece to help reduce SIDS deaths among infants in the state. Activities related to this performance measure will impact infant mortality related to SIDS in South Dakota.

OBJECTIVE

2006	2007	2008	2009	2010
1	1	1	1	1

SP # 3

PERFORMANCE MEASURE:

Percent of pregnancies which are unintended (mistimed or unwanted) and result in live birth or abortion.

GOAL

Improve pregnancy outcomes by reducing the number of unintended pregnancies.

DEFINITION

Percent of pregnancies which are unintended (mistimed or unwanted) and result in live birth or abortion.

Numerator:

Calculated number of unintended pregnancies (percent reporting unintendedness on survey multiplied by resident pregnancies resulting in one or more live births plus resident abortions occurring South Dakota for other than medical reasons).

Denominator:

Number of resident pregnancies resulting in one or more live births plus resident abortions occurring in South Dakota.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

South Dakota Perinatal Health Risk Assessment and state vital records data.

SIGNIFICANCE

Unintended pregnancies are associated with maternal health risk behaviors, low use of preventive health measures including early prenatal care, child abuse and dependency on welfare. There is a great risk for complicated births and poor pregnancy outcomes including infant mortality, birth defects and low birth weight infants.

OBJECTIVE

2006	2007	2008	2009	2010
38	38	38	38	38

SP # 4

PERFORMANCE MEASURE:

Percent of high school youth who self-report tobacco use in the past 30 days.

GOAL

Decrease the incidence of tobacco use and the associated health risks that accompany adolescent tobacco use.

DEFINITION

Percent of high school youth who self-report tobacco use in the past 30 days.

Numerator:

The state's high school fall enrollment multiplied by the percent of student's self-reporting tobacco use in the past 30 days according to the Youth Risk Behavior Survey (YRBS).

Denominator:

The state's high school fall enrollment.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

YRBS and Department of Education.

SIGNIFICANCE

Smoking is responsible for one in six adult deaths in the US and is the single most preventable cause of death. The 1997 YRBS indicated that 44% of the respondents reported smoking one or more cigarettes in the past 30 days. There is little variation between all grades surveyed in the YRBS. Initiation of smoking usually begins between grades 6 and 9, with minimal initiation after high school which supports the ongoing collaboration between DOH and DECA to collaboratively address adolescent tobacco use.

OBJECTIVE

2006	2007	2008	2009	2010
30	30	29	29	28

SP # 5

PERFORMANCE MEASURE:

Percent of school-aged children and adolescents who are overweight or obese.

GOAL

Decrease the number of school-aged children and adolescents who are overweight or obese.

DEFINITION

Percent of school-aged children and adolescents who are overweight or obese.

Numerator:

Number of children screened in the state's school height-weight report multiplied by the percent above the 95th percentile for 5-19 year olds on the state's School Height and Weight Report indicating overweight.

Denominator:

Number of children age 5-19 years screened in the state's school height-weight report.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

School Height-Weight Report. Data collection for the School Height-Weight Report for SD students was started during the 1998-1999 school year. The 1998-1999 data was analyzed using the standard at the time. The 1999-2000 and 2000-2001 data was analyzed using the new CDC growth charts.

SIGNIFICANCE

Obesity is a risk factor for many chronic conditions including cardiovascular disease, hypertension, diabetes, degenerative joint disease, and psychological problems. Overweight can result from excessive energy intake, decreased energy expenditures or impaired regulation of energy metabolism.

OBJECTIVE

2006	2007	2008	2009	2010
16.2	16	15.8	15.6	15.4

SP # 6

PERFORMANCE MEASURE:

Percent of children age 2-5 who are overweight or obese.

GOAL

To decrease the number of children age 2-5 who are overweight or obese.

DEFINITION

Children age 2-5 who are overweight or obese.

Numerator:

Number of children aged 2-5 years of age screened by the SD Department of Health WIC Program multiplied by the percent above the 95th percentile.

Denominator:

Number of children age 2-5 screened by the SD Department of Health WIC Program.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

South Pediatric Nutrition Surveillance Survey (PedNess) annual report

SIGNIFICANCE

Obesity is a risk factor for many chronic conditions including cardiovascular disease, hypertension, diabetes, degenerative joint disease, and psychological problems. Overweight can result from excessive energy intake, decreased energy expenditure or impaired regulation of energy metabolism. Weight-for-height during early infancy predicts weight-for-height during late infancy and childhood.

13.4	13.2	13	12.8	12.6

SP # 7

PERFORMANCE MEASURE:

Percent of infants who are breastfed at least 6 months

GOAL

Increase the percent of infants who are breastfed at least 6 months.

DEFINITION

Number of infants who are breastfed at least 6 months.

Numerator:

Number of infants in the survey who are breastfed at least 6 months.

Denominator:

Number of resident South Dakota births surveyed.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

South Dakota Perinatal Health Risk Assessment Survey

SIGNIFICANCE

Breastfeeding provides the most complete nutrition for infants and has many benefits to both mother and infant including decreased new cases and severity of diarrhea, respiratory infections, and ear infections. Infants who are breastfed have less overweight and the overweight rate is improved the longer the infant is breastfed.

OBJECTIVE

2006	2007	2008	2009	2010

SO # 1

OUTCOME MEASURE:

The Native American infant mortality rate per 1,000 live births.

GOAL

To reduce the Native American infant mortality in South Dakota.

DEFINITION

Numerator:

Number of deaths of Native American infants from birth through 364 days of age.

Denominator:

Number of live births to Native American mothers.

Units: 1000 **Text:** Rate

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

State vital statistics

SIGNIFICANCE

Infant mortality rate is a traditional indicator of general health status. Native American infant mortality has been a long standing public health problem. Using a five-year rolling average, the discrepancy in Native American and white infant mortality has increased over the past five years from 2.30 in 1991 to 2.61 in 1996 while overall infant mortality rates for the state have decreased from 9.4 to 5.7. Since Native American live births compose 15 percent of the live birth cohort, South Dakota must reduce the Native American to white discrepancy in infant mortality to achieve significant improvements in infant mortality.
